COMPRISING THE

## MAPS AND TABLES DESIGNED TO ACCOMPANY

## MITCHELL'S SCHOOL AND FAMILY GEOGRAPHY.

### MAPS.

- 1. World Equatorial Projection.
- 2. World Polar Projection.
- 3. Antarctic Regions.
- 4. North America.
- 5. United States.
- 6. Gold Region of California.
- 7. New Brunswick, Neva Scotia, and Newfoundland.
- 8. New England States.
- 9. Vicinity of Boston and Providence.
- 10. Vicinity of New Haven and Hartford.
- 11. Middle States.
- 12. Southern States.
- 13. State of Texas.
- 14. Western States.
- 15. Michigan and Wisconsin.
- 16. Mexico, Central America, and the West Indies.

- 17. Isthmus of Nicaragua.
- 18. Isthmus of Tehuantepes.
- 19. South America.
- 20. Isthmus of Darien.
- 21. Europe.
- 22. Great Britain and Ireland.
- 23. Germany, Switzerland, and Northern Italy.
- 24. France, Spain, Portugal, and Italy.
- 25. Greece and the Ionian Islands.
- 26. Asia.
- 27, Palestine, or the Holy Land
- 28. Africa.
- 29. Egypt.
- 30. Republic of Liberia.
- 31. Oceanica.
- 32. Sandwich, or Hawaiian Islands

#### GEOGRAPHICAL AND STATISTICAL TABLES.

- Statistics of Physical Geography, showing the area of the principal Islands and Lakes, heights of Mountains and Volcanoes, and length of principal Rivers in the world.
- Extent and Population of the different countries in the world.
- 3. Population of the principal cities of the world.
- Area and Population, Civil and Political Statistics, and Religious Denominations of the United States, in 1850.

- Agricultural Products, and Manufactures of Cotton, Iron, and Weol, in the United States, by the Census of 1850.
- 6. Historical and Educational Statistics of the United States.
- 7. Railroads and Canals in the United States.
- Population of all the counties of the Eastern, Middle, and Southern States, by the census of 1850.
- Population of all the counties of the Western States, by the census of 1850.

#### GEOGRAPHICAL AND STATISTICAL TABLES--- NO. I.

EUROPE-Continued.

#### SURFACE OF THE EARTH.

SUKFAUE UP THE EARTH.

The surface of the earth consists of unequal portions of land and water; the area of the former to that of the latter being nearly as I to 3. The lend in the Northern Hemisphere greatly predominates over that in the Sonthern; If we consider the whole to be divided into 1.0 equal parts, that in the first will be represented by 78 and parts, and that in the other by 22.

The solid portions of the earth's surface consist of a number of detached sections, or islands, each being surrounded by water. The two larger masses are, for the sake of distinction, termed-Continents; of which, one is the Eastern, and the other the Western. If the whole were divided as before ioto 100 equal parts, the two continents would be represented by 82 parts, and the islands by 18; or, in other words, the continents portion is about 4½ times more extensive than the incular.

insular.

The terms Fastern and Western, in this case, refer to Ferro, one of the Canary Islands, and the westernmost land known to the ancients. Immediately after the discovery of America, the geographers of that age, in compiling their maps of the world, adopted the meridian of Ferro as the line of separation between the Eastern and Western Hemispheres. Ferro was then believed to be in longitude 20° west from mispheres. Ferro was then believed to be in longitude 20° west from Greenwich; but it is now known to lie some distance eastward of that

Mountains are classed according to their height in feet above the level of the sea. Those of the lowest class rank from 2,000 to 10,000 feet; those of the second, from 10,000 to 20,000; and those of the first class, from 20,000 upwards. Elevations under 2000 feet are commonly

class, from 20,000 upwards. Elevations under 2000 feet are commonly denominated hills.

For many years, Mount Dhawalageri, one of the Himalaya range, was regarded as the culminating point of the globe; but, in the years 1847, Kunchinginga, an adjacent peak, was ascertained to be 176 feet higher. Chimborazo was long considered the loffiest peak of the Ander; but in 1898, Sorato and Hilimani, in Bollvia, were measured, and reported to be several thousand feet higher. Subsequently, however, it was found that an error in computing their elevation, greater than the alleged difference, was committed. Aconcagua, a volcano in the Chilian Andes, is now regarded as the most elevated point of land on the Western Condinent.

The snow line, or line of perpetual congelation on mountains, is that part of the surface where the temperature is always at the freezing point; here the snow commences, and envelopes all the upper portion in a continual whitry covering. Under the Equator, the snow line is settimated at from 15,750 to 16,000 feet above the level of the sen; thence towards either pole, it gradually descends until it reaches the surface of the earth, which, in the Northern Hemisphere, occurs at about latitude 80°, and in the Southern at a somewhat lower parallel. The snow line is not in all cases uniform; it differs considerably, from local causes, in equal latitudes, and even on opposite sides of the same range of mountains. In latitudes 20° it is estimated at alout 12,000, in 40° at 5000 feet above the level of the sea.

Heights of the principal Mountains in the World.

#### VOLCANOES.

OCEANICA.

Mount Ophir, Sumatra ..

Volcanoes are mountains that are connected with the internal fires Volcances are mountains that are connected with the Internal fires evidently existing beneath the surface of the earth, and to which they serve as chimneys, or vents. They are found in every quarter of the globe, from the island of Jan Mayen, in the extremity of the Northern Hemisphere, to Victorie Land, only 12°0 of latitude distant from the South Pole. Until recently, Volcances were supposed to exist only in the immediate vicinity of the Ocean; but it is now ascertained that there are several in the very centre of Asia, 1500 miles distant from any part of the sea. The number at present known is 427, of which 270 are active. In America there are 173 volcances, in Oceanica 163, in Asia 67, in Africa 17, in Europe 5, and in Victoria Land 2.

#### THE OCEAN.

The Sea, or Ocean, is estimated to extend over a space of 150 million square miles, or three-fourths of the eurface of the earth. The different parts are distinguished by different names; the most important being the Atlantic, Pacific, Indian, Arctic, and Antarctic Oceana. There are also various inland Seas, Baya, and Gulfa, of considerable extent; as the Mediterranean, Baltic, Caribbean and China Seas, the Oulf of Mexico, Iludon's Bay, the Bay of Beogal, &c. These are regarded as portions of the oceans with which they are connected.

The Incific Ocean in that area of water, bounded by America on the one side, and Asia and Australia on the other. Measured on the equator, it extends east and west 160 degrees of longitude, or about 11,000 miles, varying materially in which in other quarters. From north to south it occupies 126 degrees of latitude, reckoned from about the 60th parallel south to the 60th north, or about 8,700 miles, and has an area estimated at eighty-three million square miles.

The Adantic Ocean occupies the space between Europe and North America, and Africa and South America, with about the same extent north and south as the Pacific. It is more than a third as large as the Pacific, the area being reckoned at 30 million square miles. Both these oceans are divided by the Equator loto Northern and Southern.

The Indian Ocean extends from Africa to Australia, and from the shorts of Asia southward to a line supposed to be drawn from the Cape of Good Hope to the southern extremity of Van Dieneu's land. It is about one-fourth the size of the Pacific Ocean, having an area of 21 million square miles.

The Aratic or Mintern Ocean includes the basin extending around the North Pole. The Antarctic or Southern Ocean comprises the tract of sea lying around the South Pole, and southward of the Atlentic, Pacific and Indian Oceana. The Arctic and Autarctic Oceans contain together about a ninth part of the waters on the globe; the first has an area of three million, and the other of thirteen million square miles.

#### LAKES,

Lakes are found in all quarters of the globe, but are more numerous a North America Quan elsewhere. The water of lakes is generally In North America than elsewhere. The water of lakes is generally fresh; in a few instances it is salt, but vacying in degree, being some-

cato? Aconcagua? Which division of the Western Continent has the highest mountains? Of the Eastern Continent? Which is the highest mountain south of the Equator? And, Which is the highest insular mountain shown in the table? Or. What is eadled volcances? Where is extended as the summary of the continual and the summary of the summary of

times only slightly saline, or brackish. The Caspisn and Aral, with some other lakes, are usually called seas, from their superior dimensions, and from their waters being salt, like those of the ocean. In elevation and depression of level, also, lakes differ essentially. Among those remarkable for elevation of surface, are Lake Superier, 600 feet; the Lake of Briens, 1,900; the Oreat Salt Lake, 4,200; and Lake Titicaca, 12,795 feet above the level of the sea. Among the most conspicuous of the depressed or sunken lakes, are the Caspian, Aral, and Dead Seas; the two former being sunk to the depth of sbout 53 or 84 feet each, and the latter to the depth of 1312 feet, below the level of the Mediterranean.

Salt lakes have no outlet to the ocean; and, though they all receive fresh-water streams, yet, from the constant solar evaporation, their waters remain unchanged.

#### ESTIMATED AREAS OF SOME OF THE PRINCIPAL LAKES.

	Sq. miles.			Sq. miles.
Caspian Sea	145,000	Lake	Erie	7.500

Lake Baikal	14,000	Lake	Titicaca	4.000
Great Slave Lake	31,800	Great	Sult Lake	1.875

#### RIVERS,

Rivers may be classed either according to their length of course, or

Rivers may be classed either according to their length of course, or according to the extent of country drained by their waters. Regarded in the first point of view, the Mississippi, including its prinripal tributary, holds the highest rank; but if according to the second, the Anazon takes decided precedence of all other streams.

From the head of the Missouri, which rises on the east side of the Rocky Mountains, to the Balize at the mouth of the Mississippi, the entire stream, measured so as to include all its windings, is, according to one account, 4350, and, by enother, about 4100 miles. But if estimated by the length of its valley, omitting all except the chief bends, the extent is not less than 2600 miles; being, in either case, the longest river in the world. The Amazon in South America, and the Obe in Asia, each water valleys about 2500 miles in length, estimated so as to exclude the smaller windings. The basin or region drained by the Amazon and its tributaries, being the entire region enclosed by a line connecting the sources of all its branches, is estimated at 2,100,000 square miles, a tract of country equal to two-thirds the extent of Europe. The Obe, estimated in the same manner, drains a basin of 1,250,000 square miles; and the Mississippi and Missouri, a basin of 1,100,000 square miles in extent. 1,100,000 square miles in extent.

#### RECENT ANTARCTIC DISCOVERIES.

UNTIL the year 1819, no land was known to exist to the southward of the 60th deg. of south latitude. In that year, South Shetland in 1821 South Orkney, in 1831 Enderby's Land in the year following Graham's Land, and in 1839 Sabrina Land, and the Balleny Islands, were all discovered by Brit-ish navigators. In 1821, the islands of Alexander L. and Peter I., were discovered by the Russians.

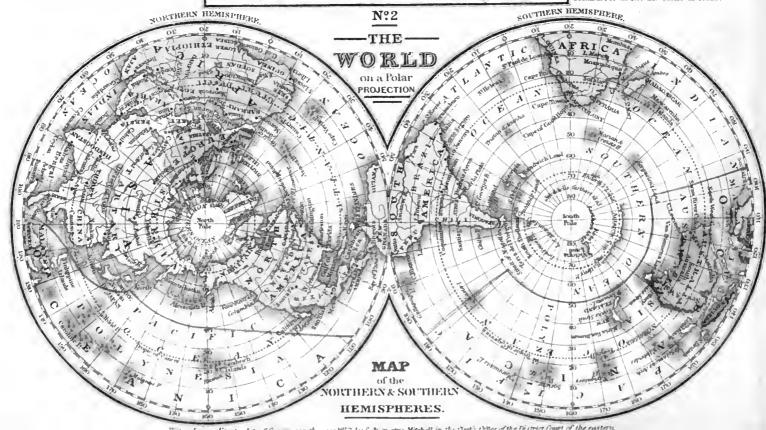

In August 1838, the U. S. Exploring Expedition, consisting of the Vincennes. Peacock, and some smaller vessels, under the command of Lieutenant Charles Wilkes. sailed from Norfolk. On the 19th of January, 1810, a continent, situate about 2,000 miles south of Australia, was discovered by the expedition, and explored for a distance of 1.700 miles from East to West, com-

11 E MAP OF the most recent ANTARCTIC DISCOVERIES. American discoveries are coloured yellow 100 French

prising the greatest extent of land yet discovered in this quarter. On the same day,

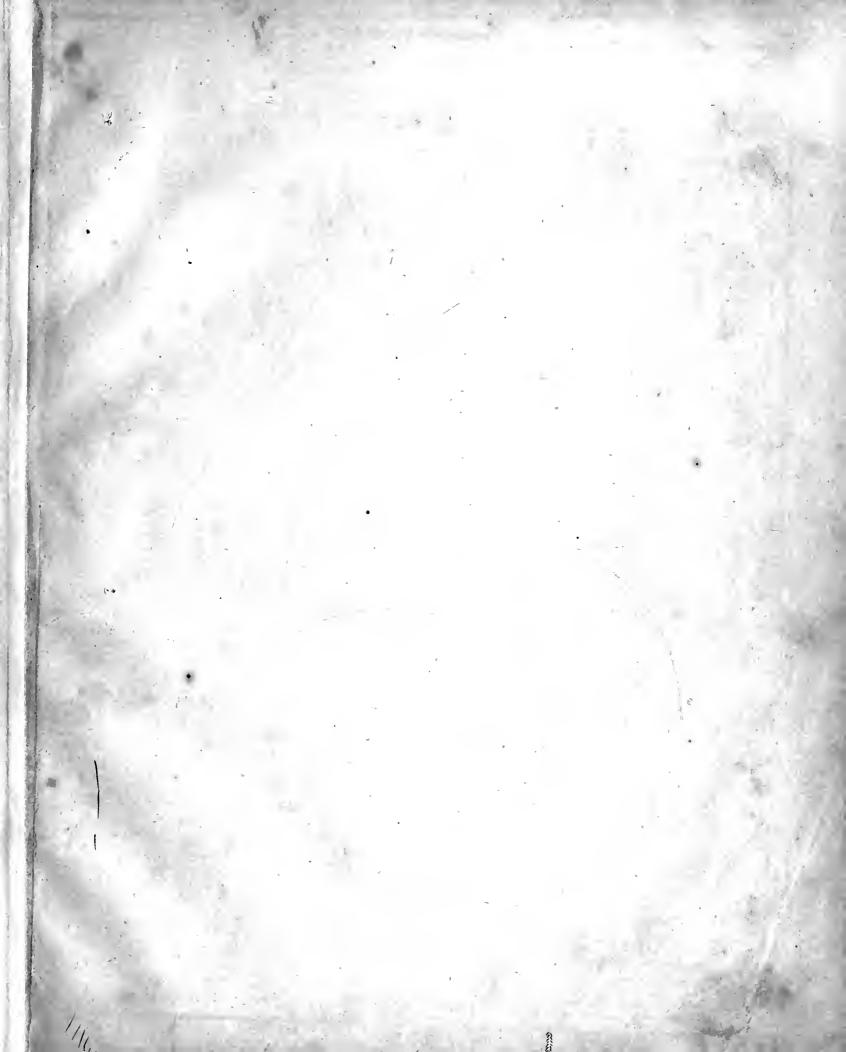

a part of the same coast was seen by Com-modore D'Urville, with the French Explo-ring Corvettes, Astrolabe and Zelee.
In 1841, Captain J. C. Ross, command-ing the British ships Erebus and Terror, discovered and explored a line of coast, ex-tending southward to within 830 miles of the South Pole, being the nearest approach yet made to that point of the globe.

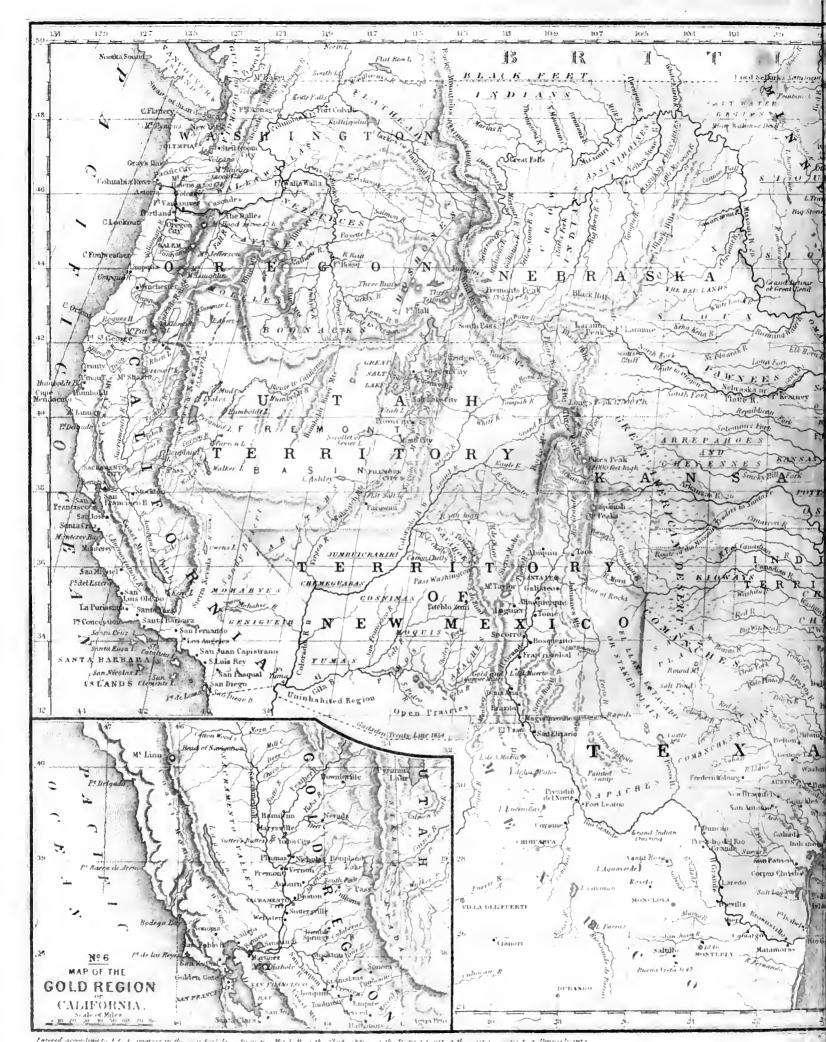

All these regions are barren and desolate, and without inhabitants: the land is all the time covered with ice and snow, and the coasts are for the most part bordered with vast masses of ice. Mount Erebus, near the most southern point reached by Capt. Ross, is an active Volcano, 12,400 feet high. Mount Terror, in the vicinity, is 12,000 feet, and Freeman's Peak, in one of the Balleny Islands, is about the same altitude.
